Once you have the correct version, you must download the software. Once you have downloaded the software, you must run it. After you have run the software, you must locate the installation file on your computer. This file is usually a simple.exe file, so you can locate this file simply by looking for it. Once you have located the installation file, open the file and run it. Once the installation is complete, you need to locate the software folder on your computer. This folder is usually located under the Adobe folder, so simply open the Adobe folder and look for the folder that will contain the Photoshop software. Once you have opened the software folder, you need to move the folder to another location on your computer. This is because you don't want to have the software folder in the same folder as other software on your computer, such as your antivirus software. Once you have opened the software folder, move the folder to another location on your computer. You can use a third-party software like WinZip to move the software folder to a new location on your computer. Once the software folder is in a different location, you can now access the Photoshop software simply by double clicking on the folder. You should now have access to the full version of Photoshop.

Color booklets are now available in the same interface that is used to click on your images, and glancing at the booklets provides you with a good visual idea of what images you have selected.
