Installation: Windows 7 Box Icons is a good idea to make your users more familiar with the Windows 7 style. You may also save Puff and Bubble Memory and Hard Disk is a software that does more than just displaying a message on your screen when you delete something. It also helps in recovering the memory by defragmenting the hard disk and by cleaning the disk cache. This useful software not only displays messages but also displays some nice images on the screen. Analog Clock is a free

analog clock that will save your time, date and time automatically and remind you on what time it is. It can also be used as a time adjuster. It will show in 24-hour format. If you are running on Windows XP then you may have to reinstall it as Microsoft no longer supports it. KeySnap is an easy-to-use hot-key software that can assign a key combination to any task. The user can also assign actions to the combinations of keys, and create macros to create even more complex tasks. PC Manager is a free utility that will help you in keeping your computer

running well by performing a number of useful functions. It will also give you an idea of how much memory your computer is using. It can also find out if your system is infected by a virus or spyware. You can also use it to clean the hard disk by defragmenting it and removing temporary files. Magic Calendar is an amazing calendar program that allows you to schedule your time and events. It also allows you to put events on the calendar. All you have to do is to enter the date, and it will automatically pull up the calendar. You can also add a

picture for each day. This free application can be very useful when you need to keep track of your time. I like to add a few updates each day to keep my computer running. I also like to keep my browser updated. However, I find that I spend a lot of time searching for the new updates. That is why I made a tool that I can just click on and get all the latest updates.Q: Inserting a value in a PHP session array with array_push I have a PHP session array which I use to pass the email address of a visitor to an external PHP script to check if the email address is

valid. I am trying to add values to this session array with array_push in case of errors in the external script: if(!
