Adobe's hugely popular RAW processor can mimic that process, saving you time in Lightroom while improving image quality in the end. If you still have the files in a folder, go ahead and add them to Lightroom. There will be a wait while Lightroom processes them. Especially for layouts, it's very beneficial to see a preview of your picture File size is affected by various features and settings, such as the camera file size that you choose when you import pictures. The default import setting is RAW, which creates a derivative from the original image file, such as the.CR2 file. If you choose JPEG, you're right back into Photoshop's template for JPEGs, and get a.jpg file with the same settings as your image. You can even create a larger file by choosing Layers, then layers, then a Large Size option. In the 2D tab, you can see where Photoshop left off when you imported the image. This can sometimes be a handy way to find where you left off on something you need to fix up. The order of tabs depends on which version you're using. On the CS3 WiFi, you'll see the app's primary tab. On version CS4, the tabs appear in the order View > Adjust > Enhance (or Filter) > Image > Edit > Control-panel.
