Byte per pixel (bpp) in OpenCL hardware accelerators refers to the bit per pixel a detected object occupies. This may not be the most intuitive term but it's very useful when reviewing RAW pictures for quality, the number of detected pixels per image. OpenCL hardware accelerators are very useful tools for computer imaging. Currently OpenCL has paved the way for image processing software to harness the full power of GPU and OpenCL is gaining momentum in the open source market and the professional sector. No matter what the bit per pixel value, the only way to get the information is to review the image file, which is not that easy. You have to open the RAW file, review it and close the RAW file. You have to open the JPEG file, review it and close the JPEG file. Exporting it would also be a tedious process. That is why, when I got my new work laptop with integrated OpenCL on it from Lenovo with a 1TB SSD, I was happy to test out the newly integrated share for review feature built into Lightroom 5. The work laptop allows me to review RAW and JPEG images live on the touch screen in front of me in the Lightroom interface. The latest version of Lightroom 5 allows you to share for review and also to comment on a shared artwork with anyone who has the link. You can also use your own Lightroom account and log into Adobe.com to get the link of your uploaded artwork in the Lightroom app. A couple of excellent workflow features new to Lightroom 5 are: 1. Automatically open the shared artwork in the client file. When you upload a new project in Lightroom 5, the app immediately opens the artwork in your client file. This automated process eliminates the need for you to double-tap or double-click a shared file to open it. You can also share images from other locations with Photoshop cloud documents. This function works just like the link for review option of the new version. Simply navigate to a location on your computer which contains your artwork, click on the Share for Review button and create a link for access from the new Lightroom 5 interface.

This new and improved version of Photoshop is one of the hottest selling and used by professional users in the world. Before the release of Photoshop CS6, members of the Photoshop users group discovered a hidden function within Photoshop, which called "Auto Crop Tool." This function allows users the ability to crop images that they have already resized. Ideally, it would not be a brilliant way to crop, or resize, images as it could easily open the user to a copyright violation of the original image. However, the feature is a simple and wonderful time-saver, and it can save users a lot of time. In this article, we will further explain the Auto Crop Tool. Earlier versions of Photoshop and other programs composing the Adobe Creative Cloud could not access completed files stored on the user's Dropbox cloud storage. And this could cause a big issue, as Dropbox is one of the most used cloud storage program for many users. To solve this problem, Adobe updated the latest version of Photoshop and required the users to pay a fee of \$50 to have access to these files. That fee is well worth it for users to get access to large Dropbox account so that these files are easy to handle. In the past application, for example, the Dropbox account could benefit other users with free accounts.
